TASK 4: CLOUD SERVICES

OPERATING SYSTEMS AND SECURITY (OSSEC)

- **Student Name:** Zinar Mutlu
- **Student ID:** 0629829
- **Email:** zinar.mutlu@vub.be
- **Date:** 08/02/2025

Introduction

Cloud services deploy and manage infrastructure. VM play an important role in cloud services, offering scalable and cost-effective solutions for many applications. In this task, i will set up a VM using a cloud service provider.

1. Choose a cloud service provider that offers some student discount

I chose Google Cloud service which is free for students. The steps involved include selecting a provider, configuring the VM, and installing an operating system.

CONNECTIVITY TESTS

- Open Remote Desktop Control on Windows and enter Google Cloud VM IP address: 35.193.245.162

- Enter Username and password:

Windows Security

Enter your credentials

These credentials will be used to connect to 35.193.245.162.

- Connected to the server:

- Server Manager

- Testing browser on VM:

Conclusion:

At the end, i created a virtual machine on google cloud by selecting Windows as operating system and then i connected to the VM to check whether is is running on the machine. It's succesfully tested on Windows.
